1 Project Information

1.1 Project

1.2 Professional Record Standards Body (PRSB) - better records for better care

The PRSB develops national standards for the structure and content of health and social care records. These cover, for example, hospital referral letters, handover communications, discharge summaries, and inpatient and outpatient letters.

The standards are currently published in the form of a final report with supporting documents including: information models and implementation guidance. The information models are published in the following formats:

- Mind maps
- Microsoft Word Documents and
- Excel spreadsheets

Many of the information models are common across the range of standards we have now developed, and we needed a tool to support all aspects of managing the models through their full life cycle including development and maintenance.

1.2.1 Transfers of care

- Admission record: the clinical, professional and personal information recorded in the hospital admission record at the time of admission.
- Handover record: handover of care from one professional or team to another including out of hours handover, or at the weekend.
- Discharge records: the information recorded in all discharge records sent from hospital services (including acute care discharge, mental health discharge and emergency care discharge) to GPs.
- Outpatient letters: the information recorded in an outpatient setting/ appointment including the initial and follow up outpatient visits and information in the outpatient letter sent to the GP and patient.
- Crisis care: the information shared between GPs and primary care with emergency care, ambulance services and community care during an emergency or acute episode.
- Clinical referral information: the information recorded in communication between GPs and consultants, copied to the patient. This may include other types of referrals. (Section Seven)

1.2.2 Integrated care records

- Healthy child record: the information recorded by the multi-disciplinary team on screening tests, immunisations and developmental milestones that should be accessible to ensure that children receive appropriate care.
- Digital care and support plan: the information recorded in a multi-disciplinary care and support plan including clinical, professional as well as the patient's own preferences and needs.

prsb03-dataelement-13874

Id prsb03-dataelement-13874 (2021-01-29 12:59:53)

Description

Under the Equality Act 2010, organisations have a legal duty to make changes in their approach or provision to ensure that services are as accessible to people with disabilities as they are for everybody else. These changes are called reasonable adjustments.

Reasonable adjustments can mean alterations to buildings by providing lifts, wide doors, ramps and tactile signage, but may also mean changes to policies, procedures and staff training to ensure that services work equally well for people with physical or sensory disabilities, learning disabilities or long-term conditions such as dementia.

Other adjustments include longer appointments, providing easy read materials or communications via a carer. This legal duty is anticipatory which means a service should know about a person's need for adjustments when they are referred or present for care. For this to happen, and for optimum care to be delivered, adjustments need to be recorded and shared across the NHS.

Description

A record of an advance decision to refuse one or more specific types of future treatment, made by a person who had capacity at the time of recording the decision. The decision only applies when the person no longer has the capacity to consent to or refuse the specific treatment being considered. An ADRT must be in writing, signed and witnessed. If the ADRT is refusing life-sustaining treatment it must state specifically that the treatment is refused even if the person's life is at risk.

Concept inherits from  prsb03-dataelement-10552 (2018-10-31)

Description A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum 180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

  **Time or values above range (T/VAR)** linkprsb03-dataelement-14434

Id	prsb03-dataelement-14434 (2021-08-15 15:03:22)
Description	The proportion of values or time above the target glycaemic range as a percentage. These are represented by the percentage of values above range (VAR) and/ or percentage time above range (TAR). These are determined from capillary blood (fingerstick testing) and interstitial glucose (continuous glucose monitor) readings respectively. Metrics computed from different data sources should be calculated and coded separately.

  **T/VAR level 2** linkprsb03-dataelement-14448

Id	prsb03-dataelement-14448 (2021-08-15 16:44:44)
Description	The proportion of values or time above the target glycaemic range as a percentage (level 2). These are represented by the proportion of capillary blood glucose values above range (VAR) and/ or percentage time above range (TAR) of interstitial fluid glucose readings measured by continuous glucose monitoring devices.

Parsable dose directions

prsb03-dataelement-10552

Id prsb03-dataelement-10552 (2018-10-31) 0.1

Description A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum 180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

 Dose

prsb03-dataelement-14456

Id	prsb03-dataelement-14456 (2021-08-24 20:46:05)
Description	Amount of dose medication .Note that this specifies the quantity of the specified medication, not the quantity for each active ingredient(s). Each ingredient amount can be communicated in the Medication resource. For example, if one wants to communicate that a tablet was 375 mg, where the dose was one tablet, you can use the Medication resource to document that the tablet was comprised of 375 mg of drug XYZ. Alternatively if the dose was 375 mg, then you may only need to use the Medication resource to indicate this was a tablet. If the example were an IV such as dopamine and you wanted to communicate that 400mg of dopamine was mixed in 500 ml of some IV solution, then this would all be communicated in the Medication resource. If the administration is not intended to be instantaneous (rate is present or timing has a duration), this can be specified to convey the total amount to be administered over the period of time as indicated by the schedule e.g. 500 ml in dose, with timing used to convey that this should be done over 4 hours.
Rationale	MedicationStatement.dosage.dose[x].doseQuantity or MedicationStatement.dosage.dose[x].doseRange

Value Domain	

 Rate

prsb03-dataelement-14457

Id	prsb03-dataelement-14457 (2021-08-24 20:50:17)
Description	Amount of medication per unit of time. Identifies the speed with which the medication was or will be introduced into the patient. Typically the rate for an infusion e.g. 100 ml per 1 hour or 100 ml/hr. May also be expressed as a rate per unit of time e.g. 500 ml per 2 hours. Other examples: 200 mcg/min or 200 mcg/1 minute; 1 liter/8 hours. Sometimes, a rate can imply duration when expressed as total volume / duration (e.g. 500mL/2 hours implies a duration of 2 hours). However, when rate doesn't imply duration (e.g. 250mL/hour), then the timing.repeat.duration is needed to convey the infuse over time period.

Over the counter medication item entry

linkprsb03-dataelement-13109

Id

prsb03-dataelement-13109 (2020-06-24 16:04:03) 0.1

Description

The details of, and instructions for, over the counter purchased medications that the person is using. All over the counter medications that the person uses regularly that are not prescribed by a medical professional. These may or may not be required for the treatment and management of their health condition(s). Examples include analgesics for pain relief (brufen tablets); topical anaesthetics (voltarol gel); vitamin and mineral supplements (folic acid and calcium); herbal medicines (St Johns Wort). Include details of reason for use, dose amount, frequency, start date and duration of medication.

Medication name

prsb03-dataelement-13200

Id	prsb03-dataelement-13200 (2020-06-24 17:45:11) 0.1
Concept inherits from	 prsb03-dataelement-10536 (2018-10-31)
Description	May be generic name or brand name.

2.1.516 Properties

Parsable dose directions

prsb03-dataelement-13132

Id	prsb03-dataelement-13132 (2020-06-24 16:06:14) 0.1		
Concept inherits from	prsb03-dataelement-10552 (2018-10-31)		
Description	A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum 180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

Concept inherits from	prsb03-dataelement-10552 (2018-10-31)		
Description	A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum 180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

Description	A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum

180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

Parsable dose directions

prsb03-dataelement-12852

Id prsb03-dataelement-12852 (2019-11-19 17:57:19)

Concept inherits from prsb03-dataelement-12727 (2019-11-19 17:33:50)

Description A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum 180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

Concept inherits from	prsb03-dataelement-12852 (2019-11-19 17:57:19)
Description	A parsable 'dose syntax' which carries dose strength, dose timing, dose duration and maximum dose information, e.g. "20-30mg ^4/6h prn [180mg /24h]" = 20 to 30 mgs, up to 4-6 hourly as required. Maximum 180mg in 24 hours. The 'as required reason' e.g. 'for pain' should be carried in the Additional Instruction element. Note that this is generally a symptom and is not the same as the Indication which will usually describe a diagnosis or condition. Where supported, this would generally be used to exchange dosage information between systems, while Structured dose directions are likely to be used only within openEHR-based systems

 **Consent for audio or video recording of the conversation**

prsb03-dataelement-13968

Id prsb03-dataelement-13968 (2021-02-04 10:25:25)

Description This is a record of consent for audio or visual recording of the conversation.

Comment The General Medical Council (GMC) Making and using video recordings of patients guidance (GMC, 2011) states in section 8 the following:

- "make recordings only where you have appropriate consent or other valid authority for doing so."
- "ensure that patients are under no pressure to give their consent for the recording to be made."
- "And you must not: disclose or use recordings for purposes outside the scope of the original consent without obtaining further consent (except in the circumstances set out [elsewhere in that document]."

The GMC guidance on Decision making and consent (GMC, 2020) makes clear that: "While some interventions require a patient's signature on a form, for most healthcare decisions you can rely on a patient's verbal consent, as long as you are satisfied they've had the opportunity to consider any relevant information (see paragraph 10) and decided to go ahead. Although a patient can give consent verbally (or non-verbally) you should make sure this is recorded in their notes."

Supporting the shared decision

linkprsb03-dataelement-14073

Id prsb03-dataelement-14073 (2021-02-17 23:43:36)

Description A record of the interventions that have supported a shared decision. This includes actions taken before, during and after (or in-between) appointments where a shared decision was discussed.

Comment Other interventions that support shared decision making such as use of an interpreter, recording of the discussion, and person(s) accompanying the patient can be found under encounter details.

The NICE guideline on Shared Decision Making (in draft) states in section 1.2.1:

"Offer people interventions that support shared decision making at different stages, including before, during and after discussions with a healthcare professional, so that they are fully involved throughout their care."

- Description** A record of the dialogue preceding the decision including the information shared that a person wanted or needed to know in order to make a decision, such as:
- Diagnosis & prognosis
 - Options for further investigation, treatment or management (including the option to take no action).
 - The potential benefits and risks of each option
- Comment** The General Medical Council guidance on Decision making (GMC, 2020) and consent states in section 10 that : "You must give patients the information they want or need to make a decision. This will usually include: diagnosis and prognosis, uncertainties about the diagnosis or prognosis, including options for further investigation, options for treating or managing the condition, including the option to take no action, the nature of each option, what would be involved, and the desired outcome, the potential benefits, risks of harm, uncertainties about and likelihood of success for each option, including the option to take no action."
- The NICE Shared decision making guideline (in development) states in section 1.2.9: "When offering tests, treatments or other healthcare services:
- openly discuss the risks, benefits and consequences of each option, making sure the person knows this includes choosing no treatment, or no change to what they are currently doing (the 'option talk' stage)."

 Description A record to establish what matters to the person in the context of the decision to be made, which may include as appropriate:

- Person goals or hopes: These are the overall goals, hopes, aims or targets that the person has. Including anything that the person wants to achieve that relates to their future health and wellbeing. Each goal may include a description of why it is important to the person. Goals may also be ranked in order of importance or priority to the person.
- Values: The values that the person holds relating to the decision or otherwise.
- Ideas: Opinions, thoughts, or prior knowledge the person has about their diagnosis, prognosis, or options for treatment, investigations, procedures or other areas they feel are relevant.

- Concerns: Any worries or fears the person has about their diagnosis (or possible diagnosis) or other areas such as treatment, investigations or procedures that may influence their decision-making or they feel are relevant.
- Expectations: Any expectations or wants of the person relating to treatment, investigations, procedures or other courses of action or other areas they feel are relevant.

Comment The General Medical Council (GMC) Decision Making and Consent guidance (GMC, 2020) states in section 21 that when discussing benefits and harms a clinician should include the following: "Recognised risks of harm that [the clinician] believe[s] anyone in the patient's position would want to know... the effect of the patient's individual clinical circumstances on the probability of a benefit or harm occurring...risks of harm and potential benefits that the patient would consider significant for any reason...any risk of serious harm, however unlikely it is to occur...expected harms, including common side effects and what to do if they occur."

"It wouldn't be reasonable to share every possible risk of harm, potential complication or side effect. Instead, you should tailor the discussion to each individual patient, guided by what matters to them, and share information in a way they can understand." (Section 22).

Comment Examples of patient decision support tools include condition specific decision aids, issue cards, decision boxes, fact boxes, question prompt lists (e.g. BRAN) and generic communication frameworks. Where high-

quality situation specific decision support tools do not exist the clinician may need to interpret evidence sources developed for health professionals. This may include decision support tools or materials brought by the patient.

The General Medical Council (GMC) Decision making and consent guidance (GMC, 2020) states in section 24: "You should consider using visual or other explanatory aids to support patients to understand their personalised risk, taking account of their individual clinical and personal circumstances, compared with population level risk."

Comment GMC (DMC 56): "Unless treatment or care begins immediately after a patient has given consent, there will be opportunity for a decision to be reviewed."

GMC (DMC 57): "You should review a patient's decision immediately before providing treatment or care and, if treatment is ongoing, make sure there are clear arrangements in place to review decisions regularly, allowing patients opportunity to ask questions and discuss any concerns. You should also consider regularly reviewing a decision to take no action."

GMC (DMC 58): "Reviewing a decision is particularly important: if you haven't personally had a discussion with the patient because they were initially seen by a colleague, if significant time has passed since the decision was made, if the patient's condition has changed, if you have reason to believe the patient might have changed their mind, if any aspect of the chosen treatment or care has changed, if new information has become available about the potential benefits or risks of harm of any of the options that might make the patient choose differently."

Description A structured entry in the record for clinicians following the three talk model approach to shared decision making.

Relationship Three-talk model cluster (prsb03-dataelement-13918 - 2021-02-03 09:38:31)

  Option talk placeholder

prsb03-dataelement-14104

Id	prsb03-dataelement-14104 (2021-02-22 13:16:02)
Description	Details of the option talk with the person (Three talk model).
Relationship	Option talk (<i>prsb03-dataelement-13922 - 2021-02-03 09:57:39</i>)
Comment	<p>Overview: The option talk includes a discussion of the options and alternatives and the harms and benefits of these using evidence based risk communication principles.</p> <p>Suggested phrase: "Let's compare the possible options." (Elwyn, 2020)</p> <p>According to Elwyn (2016) the option talk discussion may include the following key aspects: Checking knowledge, listing options, describing options, exploring harms and benefits, providing patient decision support, summarising.</p> <p>The General Medical Council guidance on Decision making (GMC, 2020) and consent states in section 10 that : "You must give patients the information they want or need to make a decision. This will usually include: diagnosis and prognosis, uncertainties about the diagnosis or prognosis, including options for further investigation, options for treating or managing the condition, including the option to take no action, the nature of each option, what would be involved, and the desired outcome, the potential benefits, risks of harm, uncertainties about and likelihood of success for each option, including the option to take no action."</p> <p>The NICE Shared decision making guideline (in development) states in section 1.2.9: "When offering tests, treatments or other healthcare services:</p> <ul style="list-style-type: none"> • openly discuss the risks, benefits and consequences of each option, making sure the person knows this includes choosing no treatment, or no change to what they are currently doing (the 'option talk' stage)."

Ask 3 questions model cluster

linkprsb03-dataelement-14019

Id	prsb03-dataelement-14019 (2021-02-15 12:25:33)
Description	<p>A structured entry in the record for use when a shared decision making conversation has been conducted using the 'Ask 3 questions' framework. This patient focused shared decision making tool encourages the patient to ask the following three questions when making decisions about their healthcare:</p> <p>What are my options?</p> <p>What are the pros and cons of each option for me?</p> <p>How do I get support to help me make a decision that is right for me?</p>
Comment	<p>Ask 3 questions is the patient focused part of the national Shared Decision Making programme. It has been adapted with permission for use in the NHS by the Advancing Quality Alliance (AQuA) from the Making Good Decisions in Collaboration (MAGIC) improvement programme. AQuA has developed films, posters and other materials for its Ask 3 questions campaign to be seen by patients in advance of clinical encounters, where a decision may need to be made.</p> <p>The framework is based on a set of questions originally tested by Shepherd <i>et al.</i> 2011 in a cross over trial. The questions tested were:</p> <p>What are my options? What are the benefits and harms? How likely are these?</p> <p>In the study, use of these questions was associated with improved scores in the Assessing Communication about Evidence and Patient Preferences (ACEPP) and OPTION (observing patient involvement) scales.</p>

  **BRA(I)N model Cluster**

linkprsb03-dataelement-13879

Id prsb03-dataelement-13879 (2021-02-01 16:24:40)

Description A structured entry in the record for clinicians following the BRAN or BRAIN approach to shared decision making. The BRAN mnemonic covers the following:
B = Benefits
R = Risks
A = Alternatives
N = doing Nothing

Alternatively, the BRAIN mnemonic covers the following:
B = Benefits
R = Risks
A = Alternatives
I = Intuition
N = Next steps (as opposed to 'doing Nothing' in BRAN)

Comment The acronym BRAN is a decision support tool endorsed by the Academy of Medical Royal Colleges (AoMRC) for the purpose of structuring shared decision making conversations (BMJ, 2019).

The Centre for Collaboration, Motivation, and Innovation has developed a BRAN alternative called BRAIN (CCMI, 2015).

Description A record of the person's intuition (BRAIN framework).

Comment The Centre for Collaboration, Motivation, and Innovation has developed a BRAN alternative called BRAIN (CCMI, 2015). This model involves the patient first asking the following questions:
 What is the decision I need to make?
 How much time do I have to make this decision?
 Who is involved in making this decision?
 What are my values that affect this decision?

The BRAIN mnemonic covers the following:

B = Benefits

R = Risks

A = Alternatives

I = Intuition

N = Next steps (as opposed to 'doing Nothing' in BRAN)

At the intuition step the patient asks the following question:

What do I feel and think about these options? The outcome should be entered into the record here.

Comment The General Medical Council (GMC) Decision making and consent guidance (GMC, 2020) states: "You should take a proportionate approach to the level of detail you record. Good medical practice states that you must include the decisions made and actions agreed - and who is making the decisions and agreeing the actions - in the patient's clinical records. This includes decisions to take no action."

Id prsb03-dataelement-13919 (2021-02-03 09:46:21)
Description Details of the team talk (previously choice talk) with the person (Three talk model).
Comment Overview: The team talk (previously choice talk) includes working together, describing choices, offering support and asking about the person's goals.
 Suggested phrase: "Let's work as a team to make a decision that suits you best." (Elwyn, 2020)
 A key purpose of the team talk is to make the the person, who by this point recognises that a health issue that requires a decision has been identified, aware that options exist. The team talk can be done face-to-face, by email or letter, telephone or other means and may include the use of patient decision support tools (Elwyn, 2016).
 The NICE Shared decision making guideline (in development) states in section 1.2.7: "Ensure the person understands they can take part as fully as they want in making choices about their treatment or care (the 'choice talk' stage of the three-talk model)."

Comment Overview: The decision talk aims to establish a person's informed preferences and to make preference based decisions.
Suggested phrase: "Tell me what matters most to you for this decision." (Elwyn, 2020)
According to Elwyn (2016) the decision talk discussion may include the following key aspects: Focusing on preferences, eliciting and integrating preferences, moving to a decision, offering review.

The NICE guideline on Shared Decision Making (in draft) states:

In section 1.2.13:

"Make a joint decision or plan about treatment or care and agree when this will be reviewed (the 'decision' or 'planning' stage)."

In section 1.2.14:

"At the end of an appointment, state clearly what decisions have been made to make sure the person agrees with and understands what has been decided, what happens next, what the timescales are, and when it will be reviewed."

In section 1.2.15:

"When writing up the consultation, record any decisions made along with details of what the person said was important to them in making those decisions."

  **Post-appointment actions**

linkprsb03-dataelement-14076

Id prsb03-dataelement-14076 (2021-02-17 23:58:44)

Description A record of the actions agreed to support the shared decision after the appointment. This should include:

Agreed actions for the professional such as those related to further information to be shared, planned investigations, procedures and treatment for a person's identified conditions and priorities.

Actions for the person or their carer. For example, following clinician shared printouts summarising the options or decisions made and there may be action for patient to review . Following clinician signposting to relevant online or physical information resources there may be an agreed action for the person to access and review the materials.

Comment Kings Fund (2011):
"There should be a formal system for documenting:

1. the decision
2. the agreed course of action
3. the ongoing roles and responsibilities of each party
4. the risk-sharing agreement.."

The NICE Shared Decision Making guideline (in draft) states in section 1.2.16 that after appointments:

"Give people resources to help them understand what was discussed and decided in their appointment. This could be a printout summarising the options and decisions or plans made, and links to high-quality online resources (for example, relevant NICE guidelines). Ideally, give people this material to take away, or provide it very soon after the appointment."

In 1.2.17:

"In secondary or tertiary care, consider asking the person if they would like a letter detailing the information from their appointment to be sent to them and copied to their GP. Letters should be written in line with Academy of Medical Royal Colleges guidance on writing outpatient clinical letters to patients."

 Reasonable adjustment flag	0 ... 1	prsb03-dataelement-13874 link

Under the Equality Act 2010, organisations have a legal duty to make changes in their approach or provision to ensure that services are as accessible to people with disabilities as they are for everybody else. These changes are called reasonable adjustments.

Reasonable adjustments can mean alterations to buildings by providing lifts, wide doors, ramps and tactile signage, but may also mean changes to policies, procedures and staff training to ensure that services work equally well for people with physical or sensory disabilities, learning disabilities or long-term conditions such as dementia.

Other adjustments include longer appointments, providing easy read materials or communications via a carer. This legal duty is anticipatory which means a service should know about a person's need for adjustments when they are referred or present for care. For this to happen, and for optimum care to be delivered, adjustments need to be recorded and shared across the NHS.

Under the Equality Act 2010, organisations have a legal duty to make changes in their approach or provision to ensure that services are as accessible to people with disabilities as they are for everybody else. These changes are called reasonable adjustments.

Reasonable adjustments can mean alterations to buildings by providing lifts, wide doors, ramps and tactile signage, but may also mean changes to policies, procedures and staff training to ensure that services work equally well for people with physical or sensory disabilities, learning disabilities or long-term conditions such as dementia.

Other adjustments include longer appointments, providing easy read materials or communications via a carer. This legal duty is anticipatory which means a service should know about a person's need for adjustments when they are referred or present for care. For this to happen, and for optimum care to be delivered, adjustments need to be recorded and shared across the NHS.

 Reasonable adjustment flag	0 ... 1	prsb03-dataelement-13874 link
	Under the Equality Act 2010, organisations have a legal duty to make changes in their approach or provision to ensure that services are as accessible to people with disabilities as they are for everybody else. These changes are called reasonable adjustments.	
	Reasonable adjustments can mean alterations to buildings by providing lifts, wide doors, ramps and tactile signage, but may also mean changes to policies, procedures and staff training to ensure that services work equally well for people with physical or sensory disabilities, learning disabilities or long-term conditions such as dementia.	
	Other adjustments include longer appointments, providing easy read materials or communications via a carer. This legal duty is anticipatory which means a service should know about a person's need for adjustments when they are referred or present for care. For this to happen, and for optimum care to be delivered, adjustments need to be recorded and shared across the NHS.
